Smart
LEDZ[®]
SYSTEM

 **Safety Precautions**

- Lighting fixtures have limited service lifetime.
- We recommend that you inspect and/or replace fixtures 8-10 years after installation, for they may have deteriorated on the inside even if their outward appearance seems normal.

*Use conditions: ambient temperature 30°C, 10 hours of light-up per day, 3,000 hours of light-up per year

- Higher ambient temperatures and longer light-up times will result in shorter service life.
- Please perform voluntary inspections at least once a year.
- Please have an expert (e.g. from your constructor) perform an inspection at least once every three years.
- Continued use of fixtures without inspection over long periods of time may cause them to, though rarely, smoke, catch on fire, or cause electrocution.

- Please note that products are still under development. This means that product images and specifications in this document may not be up to date.
- Some of the images and data in this document are simulations for demonstrating color and brightness. Please note that they may not necessarily represent the actual specifications.
- Please note that LED devices, due to their variable nature, may be less uniform in their color and brightness compared to more common light sources such as incandescent and fluorescent lamps.
- See Specification Diagrams to learn more about products before use.
- To use products safely, please be sure to read the User's Manuals in advance.
- Specification Diagrams and User's Manuals are published on our website.

Easy, Convenient, and Flexible

The New Standard of Lighting Control

Just install your lighting fixtures—and you're all set!
An innovative dimmer application that flexibly "fits" your needs and the needs of your space.

No Additional Cost to Start

Start anytime

You can control your lighting without construction work just by installing compatible lighting fixtures. No special equipment necessary. Customize your lighting easily using your smartphone or tablet.

Flexibly make changes later

Flexibly adaptable to layout changes and fixture additions. The system allows settings to be freely changed according to the method of use.

Rapid Setup In 3 Steps

No major construction necessary

A simple system that lets you get started just by installing the fixtures.

STEP 1

Install wireless dimmer compatible fixtures

STEP 2

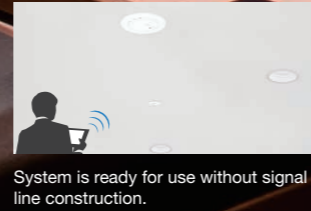

Download specialized app and perform settings

App can be downloaded for free.

STEP 3

You're all set!

System is ready for use without signal line construction.

Easily Connectable Up to 250 units

One system supports up to 250 units.

Using the gateway, Smart LEDZ Fit can control up to 250 fixtures per system*. Also, intercommunication (2.4 GHz mesh) between lighting fixtures allows for more stable operation.

*Sensors and remote controls included in the 250 fixtures.

1 Finger Operation

駆けぬける歓び

Welcome

Easy and intuitive operation at the touch of a finger

Specialized app (free to download) that supports commercially available tablets and smartphones. Its intuitively usable interface allows anyone to access a diverse variety of dimming features, such as individual control and scene switching, at the touch of a finger, without any special training.

What is Smart & Fit ?

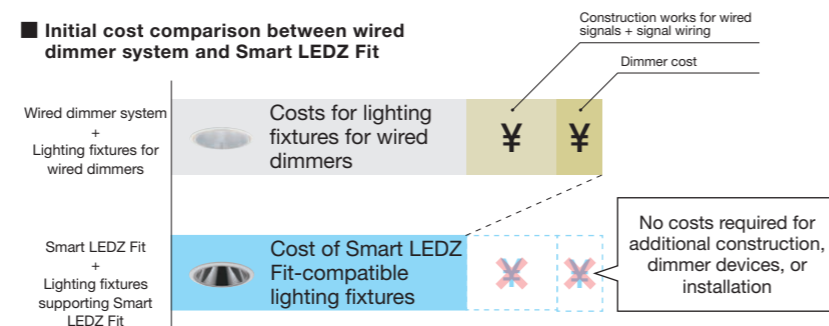

More Useful and Affordable than Manual Dimmers!

Costs less than using manual dimmers, even if you employ a Gateway for automatic operation.

A great "fit" even for those who want to "start small."

Initial cost comparison between wired dimmer system and Smart LEDZ Fit

Configuration for wired dimmer lighting systems

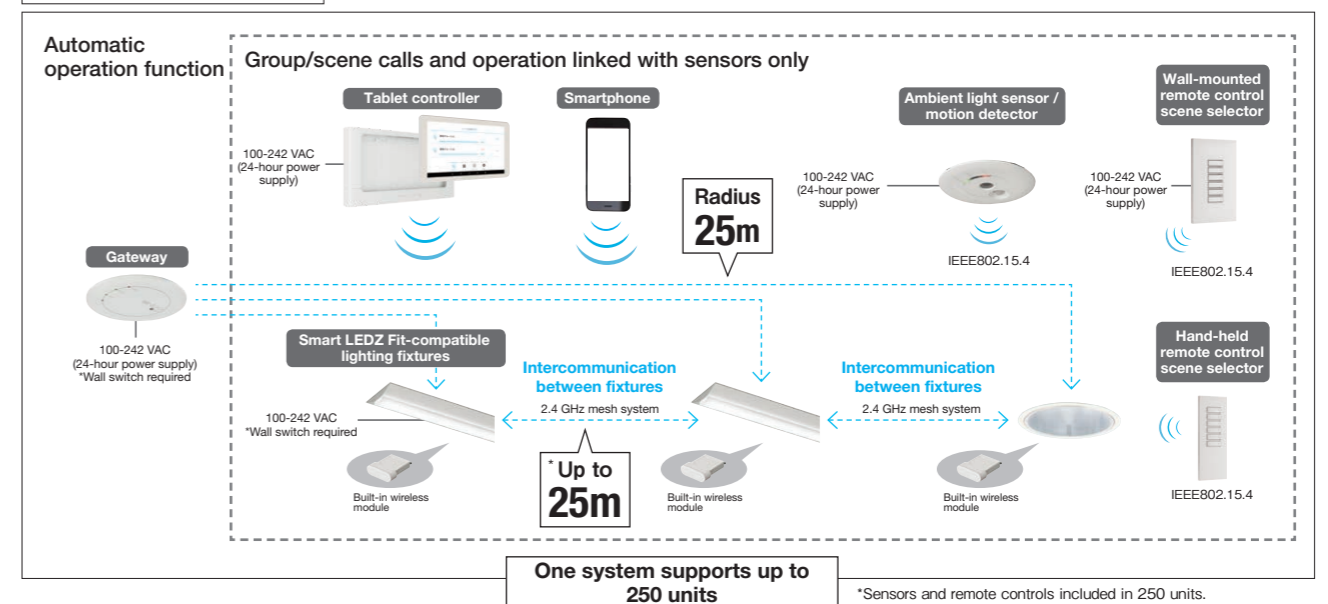

Configuration for Smart LEDZ Fit

Scalable to suit your needs

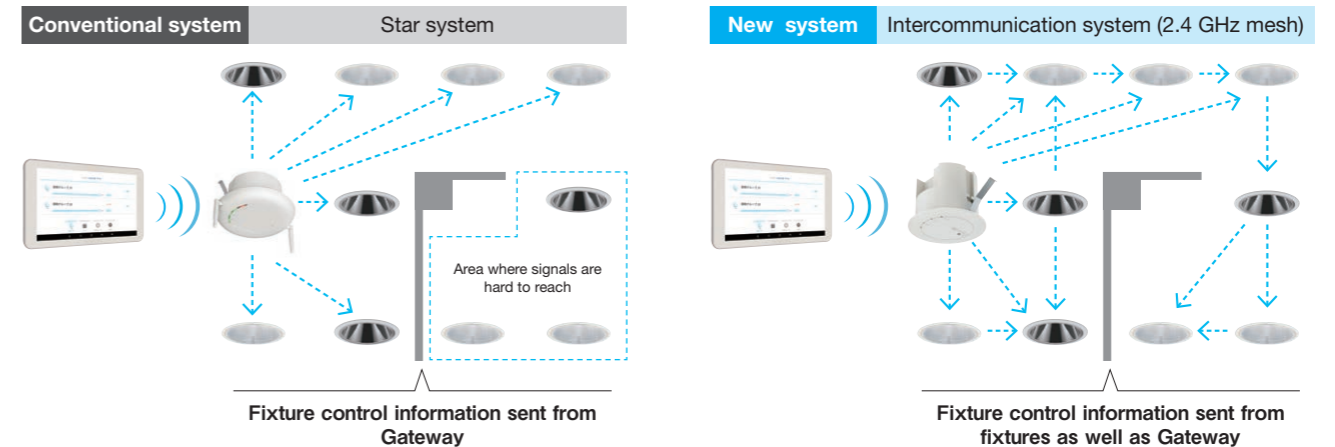

A simple system configuration coupled with versatile setup features. A rich array of useful features such as set data saving and copying.

System Configuration

A New, More Reliable Communication System

Newly adopted intercommunication method where signals are relayed, enabling them to go around obstacles, making it easier to connect than in conventional systems.

Select the system according to your purpose

You can choose an affordable "investment" to suit your purpose.

---	---	---	---	---

- Individual control
- Scene switching
- Maintains appropriate illuminance
- Maintains illuminance by utilizing daylight
- Illuminance control using motion sensor
- Illuminance scheduling
- Expansion of controllable units
- Lighting fixture layout
- Centralized control
- Linked with external equipment

Setting and operation are intuitive!

The location of the lighting fixtures is displayed on the tablet, therefore grouping and manipulation of the lighting fixtures are intuitive. Since grouping can be performed in advance, it is possible to shorten the setting time at the site.

Main Features

Individual control

Allows you to control each lighting fixture individually to fine-tune your lighting environment.

Scene switching

Allows you to call the scene that best suits your settings.

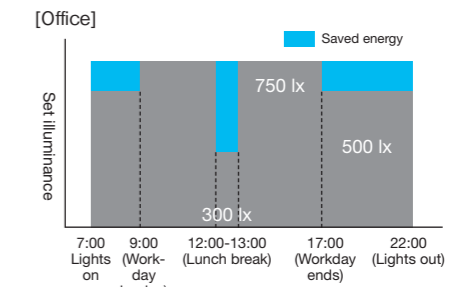

*In closed-off spaces such as conference rooms and office rooms, remote controls are convenient. Up to 6 scenes can be set and registered on a single remote control.

Scheduling

Different brightness settings can be set for different times of the day or according to your weekly schedule.

Maintaining appropriate illuminance

Ambient light sensor detects brightness to automatically make adjustments to match your illuminance settings. Energy saving is realized through maintaining appropriate illuminance.

*Cannot be used together with scene/scheduling features

Maintaining appropriate illuminance by utilizing daylight

Ambient light sensor / motion sensor automatically detects the brightness of natural light to maintain appropriate illuminance, both day and night.

*Cannot be used together with scene/scheduling features

Illuminance control using motion sensor

Saves energy by setting brightness according to space usage conditions.

*Cannot be used together with scene/scheduling features

10,000 use cases

Employed and favorably received in many projects

Morning

Olinas Mall Core

Owner: CapitalLand (Japan) Kabushiki Kaisha
 Environmental Design: Bauhaus Maruei Co., Ltd.
 Construction: Tokyu Construction Co., Ltd.

Daytime

Night

You can feel sky through indirect lighting fixtures

Color temperature changes in conjunction with light from outside. The effects tailored to the time zone make the ceiling freedom like sky. In addition, it is possible to create effects that people can feel the time lapse on the wall surface of room.

Morning : 5000K

Evening : 2700K

You can emphasize the object by color tuning

Illuminating at a color temperature slightly higher than the surrounding environment makes the object prominent and increases visibility from remote locations.

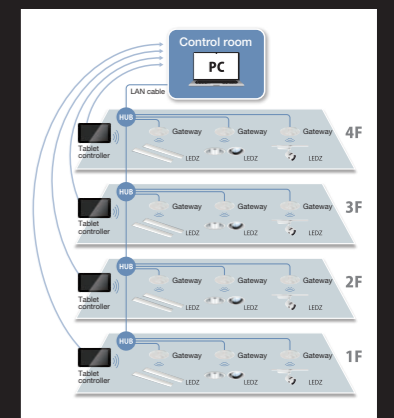

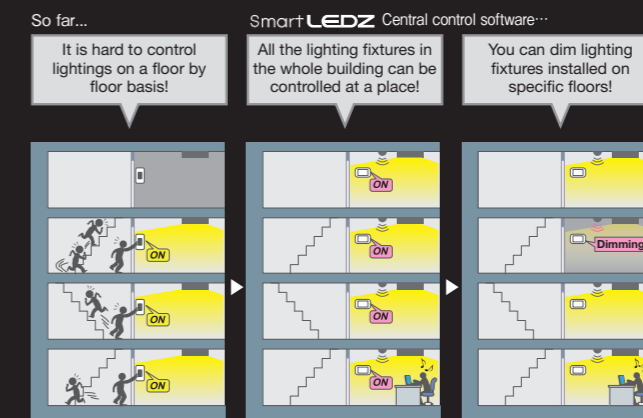

No dimming : All 3500K

Dimming : VIP effect 4000K

You can control lighting fixtures with general PC at a low cost. It is possible to control and operate 30,000 lightings fixtures.

By using central control software, maximum 30,000 lighting fixtures for 10 systems can be controlled and operated by general PC. Complicated systems and personal computers are not required, therefore the cost of installation can be drastically reduced and operators can enhance efficiency of operation.

Projects

Prism Hall, Tokyo Dome City

Place: Bunkyo-ku, Tokyo
Owner: Tokyo Dome Corporation
Design: PARCO Space Systems Co., Ltd.

Prism Hall, Tokyo Dome City is an event hall operated by Tokyo Dome Corporation and 2,000 people can stay in the hall. It is used for a wide range of purposes such as exhibition, sales meeting, various seminars and events because of that JR Suidobashi station, Tokyo Metro Marunouchi line and several stations such as Korakuen station are close to the hall and traffic access is excellent. In the hall, central control system was introduced from the viewpoint of Smart LEDZ and management system so that it can correspond to a wide variety of application in line with conventional lighting fixtures to LED.

Large-scale individual dimming and total dimming can be easily achieved by tablet control at the site and central control by PC.

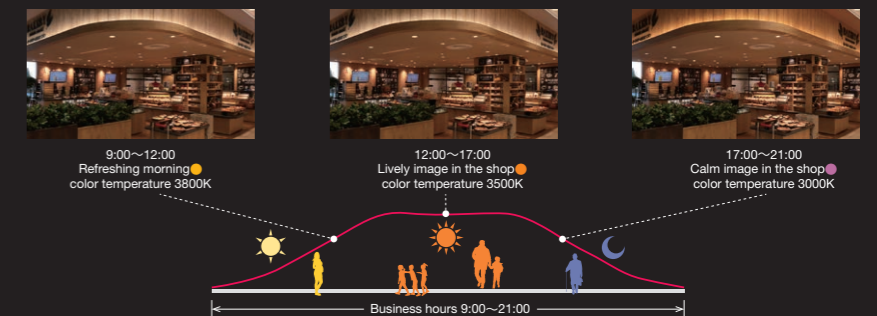

In this project, approximately 600 fluorescent lamps were replaced with 300 base-lighting fixtures and 300 ceiling-downlights. At the same time, the project adopted Smart LEDZ that allow light to be controlled without changing lighting fixtures and wires for each event. The tablet is handed over to event company in charge of the construction of each event, and lighting control in line with the concept of the event can be done at the site. In addition, the hall is divided by partitions, and there are many cases where multiple events are held. If there are Smart LEDZ, you can dim each of the areas. Furthermore, from the state that each of event companies dims lighting fixtures separately, it is possible to turn back to the state before the events by central control system in the control room. As a result, light environment wanted by event companies can be faithfully produced at the site, and lighting management such as restoration by facilities manager becomes easier.

Ito-Yokado No Yakitate Pan, Higashiyamato Store

Owner: Ito-Yokado Co., Ltd.

Smart LEDZ can create a flow of light that is in harmony with the optimal light environment and human senses tailored to the day's movement.

Dimming and color tuning based on internal rhythm and external light

If you use Smart LEDZ scheduling function for dimming and color tuning in conjunction with internal rhythm (circadian rhythm), you will be able to make suitable effects in the morning, day time and night as customers can feel relaxed in the shop. As the result, wasteful power consumption is reduced, leading to reduction in power consumption throughout the year.

Reduction in power consumption by approximately **28%** compared with conventional lighting fixtures

Power consumption simulation			
		Power consumption (W)	Annual power consumption (kWh)
LEDZ	100% lighting on	3237	14,178
Smart LEDZ Schedule control	Morning		
	Daytime	2317	10,148
	Night		

Quantities and lighting times are simulations of assumptions. Difference in electric energy **4,030kWh**

Lighting day per year : 365 days per year
 Lighting time: 12 hours per day

Approximately **28%** reduction

Making dimming and color tuning more accessible — A proposal that “fits” your needs!

Dimming and color tuning for your entire space

Products in our new Dimming and Light Tunable Series all have a color tuning range of 6500K-2700K. This allows you to collectively adjust all fixtures in your configured group to the same color temperature and dimming rate. You can easily make dynamic spatial presentations.

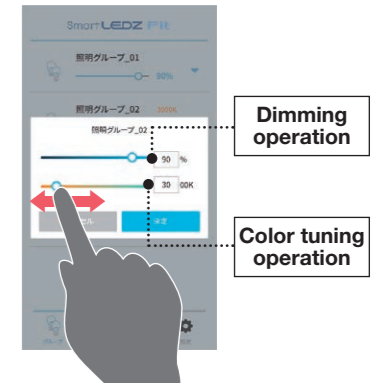

Easier construction and configuration

Previously, two power units were required for each fixture, which meant that two units needed to be registered to the controller as well. For this new product line, we made changes so that only one power unit is required per fixture, thereby improving workability and making registration and configuration easier.

More intuitive operations

Dimming and color tuning can now be performed separately. Adjustments for individual fixtures, entire groups, etc. can be made intuitively and easily through on-screen operations.

For example, at a restaurant...

A space that is hospitable any time of the day.

Brightness and color temperatures can be set according to the time of day, in accordance with the daily schedule, to deliver a comfortable atmosphere. You can also set light-up times according to the weekly schedule to fit changes in business hours, or change your settings to accommodate special events, irregular occasions, and so forth.

Smart LEDZ System Product List

Ambient Light Sensor / Motion Sensor

Fit/Fit Plus Combination
FX-428W
FX-428B

Body: Plastic (white matt finish / black matt finish)
 Weight: 0.2kg Rated voltage: 100-242 VAC: ϕ 75 Adjustable sensor sensitivity
 Built-in wireless module 2 light-proof stickers included
 Cannot be installed with thermal insulation
 Ambient light sensor mode: Only 1 unit can be registered for each group
 Motion detector mode: Up to 10 units can be registered for each group
 • 24-hour power supply is required.
 • This device uses intercommunication. Please install at least one system device within 25 m (line of sight). The accuracy of communication increases the more devices there are in the line of sight.
 • Can be used with Smart LEDZ Fit/Fit Plus compatible fixtures.

Registered Design

Direct-mount Bracket for Illuminance Sensor and Human Sensor
FX-269W
FX-269B

Body: White/black

NEW

Handy Remote Controller Scene Selector

Fit/Fit Plus Combination
FX-431W

Body: Plastic (white) Weight: 0.1kg
 Power: 2 x AAA batteries Built-in wireless module
 With wall bracket Switchable for up to 6 scenes
 Up to 10 units can be registered per system.
 • Up to 10 units can be registered in total with the Wall-mounted Remote Control Scene Selector and the Handy Remote Controller Scene Selector.
 • Can be used with Smart LEDZ Fit/Fit Plus compatible fixtures.

Patented

Wall-mounted Remote Control Scene Selector

Fit/Fit Plus Combination
FX-427W

Body: Plastic (white) Weight: 0.1kg
 Rated voltage: 100-242 VAC
 Compatible with commercially available JIS-compliant single switch boxes.
 Built-in wireless module Switchable for up to 6 scenes
 Up to 10 units can be registered per system
 • Up to 10 units can be registered in total with the Wall-mounted Remote Control Scene Selector and the Handy Remote Controller Scene Selector.
 • 24-hour power supply is required.
 • This device uses intercommunication. Please install at least one system device within 25 m (line of sight). The accuracy of communication increases the more devices there are in the line of sight.
 • Can be used with Smart LEDZ Fit/Fit Plus compatible fixtures.

Patented

Non-voltage A-contact Unit

Fit/Fit Plus Combination
FX-440W
FX-440B

Body: Plastic (white matt finish / black matt finish)
 Weight: 0.2kg Rated voltage: 100-242 VAC: ϕ 75 Built-in wireless module
 Cannot be installed with thermal insulation
 Non-voltage a-contact output 100 VAC/30 VDC
 • 24-hour power supply is required.
 • This device uses intercommunication. Please install at least one system device within 25 m (line of sight). The accuracy of communication increases the more devices there are in the line of sight.
 • Do not install in a distribution panel.

Notes • When controlling lighting fixtures, use LED lamps only.
 • To control a fixture, use a "remote control breaker (always excited, a-contact type)."
 • The contact circuit voltage of this unit should not exceed 100 VAC/30 VDC.
 • This unit cannot be used in conjunction with the illuminance sensor and human sensor (FX-428W/B). (Can be linked for human sensor mode.)

PWM Signal Unit

Fit/Fit Plus Combination
FX-441W
FX-441B

Body: Plastic (white matt finish / black matt finish)
 Weight: 0.2kg Rated voltage: 100-242 VAC: ϕ 75 Built-in wireless module
 Cannot be installed with thermal insulation
 PWM signal output PWM dimming signal output line (CPEV-1P/0.9) must not exceed 100 m in total wiring length. Each Signal Unit can be connected to a maximum of 50 PWM lighting fixtures.
 • 24-hour power supply is required.
 • This device uses intercommunication. Please install at least one system device within 25 m (line of sight). The accuracy of communication increases the more devices there are in the line of sight.
 • Do not install in a distribution panel.
 • The dimming range is limited by the dimming range of the PWM lighting fixtures.

Phase Dimming Unit

Fit/Fit Plus Combination
FX-426N

Weight: 0.3kg Input voltage: 100 VAC (50/60 Hz)
 Built-in wireless module
 Cannot be installed with thermal insulation
 Applicable load: 4 VA to 300 VA
 • A minimum 75-mm dia. opening is required for ceiling mounting.
 • Must be used in combination with a Smart LEDZ Fit/Fit Plus system.

Contact Converter

For Fit Plus only
FX-304W

Power consumption: 3.0W Body: Plastic (white)
 Weight: 0.3kg Dimensions: 30 H x 140 W x 60 D
 Rated voltage: 100-242 VAC
 Power adapter included: a(b) contact input

Notes • This device cannot be used alone. Use only with a Model FX-438N Smart LEDZ Fit Plus Dedicated Tablet Controller (with AC adapter) and a Model FX-430W/B Smart LEDZ Fit Plus Dedicated Gateway.
 • Use only the supplied power adapter.

Centralized Management Software

For Fit Plus only
FX-439N NEW

Windows 7 and above are supported. Max. number of controllable systems: 10

Notes • When connecting to a wired LAN, use a commercially available hub.
 • Computer not included; a customer-supplied unit is required.

EMS Unit

For Fit Plus only
FX-452N NEW

Smart LEDZ Fit Plus: Manages 1 system (up to 3,000 units).

Tunable LEDZ

Tunable Glare-less Downlight

Suppress unpleasant brightness with Light Distribution Control.

The combination of a light-diffusing design that minimizes visibility of the lamp in the cone and a mirror-surface cone reduces brightness. The result is a glare-less fixture that doesn't draw attention to itself.

The refined design effectively hides the edge behind the cone and eliminates unpleasant brightness.

Tunable LEDZ

Tunable Glare-less Adjustable Downlight

For Beautiful Night-time Scenery

Since the fixture hides the actual lamp, high-quality interiors can be designed without the lamp entering the field of view. Reflections on window glass are minimized, adding to the beauty of evening and night-time views.

Glare-less mirrored cone
Nighttime scenery looks even more appealing thanks to the reduction of glare on the window glass.

General-purpose mirrored cone (silver)
Glare readily appears on the window glass.

Notes:

- At a color temperature of 5000K, the change in luminous flux due to tuning is indexed as 100%.
- The ratio curve depicted above represents typical values. Some variation occurs depending on the fixtures used and the dimming level setting.
- Due to the characteristics of LEDs, variations in light color may increase at dimming rates of 10% or less.

An adjustable downlight that accommodates a variety of Tunable White bulbs for applications ranging from spacious interiors to pinpoint product presentations

Precise Tunable White lighting that emphasizes zones or products

Thanks to our pinpoint Tunable White bulbs, this fixture is ideal for emphasizing individual objects. By illuminating an object with a slightly higher color temperature than is used in the surrounding area, the target becomes more prominent, increasing its visibility from a distance. This fixture is recommended for temporary situations, such as events and sales promotions.

Without Tunable White bulbs: 3500K everywhere

With Tunable White bulbs: The visual presentation alone is 4000K.

Tunable LEDZ

Fit Fit Plus Wireless Tunable White Linear 32

A line of Tunable White lighting units for a wide range of uses such as indirect lighting and fixed lighting

Indirect lighting recreates the sky by creating a sense of time and seasonality.

Indirect lighting on and near the ceiling is always easily visible and is a technique that emphasizes the effects of Tunable White lighting. By changing the color temperature over time according to changes in the ambient light, it is possible to obtain a stunning effect resembling the natural light of the sky. This provides customers with a relaxed sense of openness that follows the time of day.

OPTION

Tunable LEDZ

Linear 32 PWM Type

The Tunable White model controls color and brightness.

The Comfort Tunable White model changes the color automatically in conjunction with a Tunable White bulb.

Flexible control of color and brightness is ideal for creating atmosphere.

By adjusting the color temperature in response to the natural exterior light and modifying the brightness according to the color temperature, you can create a comfortable lighting environment. In addition, the color temperature and illuminance can be increased in the morning and reduced in the evening. As a result, you can follow the rhythm of the day to suit the purpose of the space.

Example of brightness (illuminance) and color temperature settings changing with the time of day

Correlation between color temperature and dimming rate / brightness

OPTION

Tunable LEDZ

Fit/Fit Plus Wireless Tunable White Linear T5

Slimmer than a conventional fluorescent light fixture with a T5 tube. Seamless lighting that is easy to use for both indirect lighting and fixture lighting.

A compact fixture providing beautiful indirect light that does not create shadows

Thanks to the use of butt connections, the light emitted through the side cover provides beautiful, shadow-free indirect illumination. The built-in power supply avoids the need for power supply installation space. As a result, the fixture provides beautiful indirect light even when used in the confined spaces of furniture and built-ins.

Fit/Fit Plus Wireless Tunable White High-powered Flexible Tape Light (for indoor and outdoor use)

A compact, high-powered, all-purpose tape light for indoor and outdoor use. Can be ordered in lengths of 30-mm increments.

Highly waterproof construction resistant to a wide range of temperatures. Safe for use both indoors and outdoors.

With an IP65 enclosure rating, this waterproof design can withstand moisture and rain. Thanks to its robust structure, it can be used outdoors even in cold environments or in sunlight in high temperatures.

Notes
• Mount in a well-drained location.
• The service life of the light source is compliant with JIS C8155:2010/Luminous flux maintenance rate: 70% minimum

Flexible control of color and brightness is ideal for creating atmosphere.

By adjusting the color temperature in response to the natural exterior light and modifying the brightness according to the color temperature, you can create a comfortable lighting environment. In addition, the color temperature and illuminance can be increased in the morning and reduced in the evening. As a result, you can follow the rhythm of the day to suit the purpose of the space.

Example of brightness (illuminance) and color temperature settings changing with the time of day

Tunable Luminous Flux Ratios

Notes:
 • At a color temperature of 5000K, the change in luminous flux due to tuning is indexed as 100%.
 • The ratio curve depicted above represents typical values. Some variation occurs depending on the fixtures used and the dimming level setting.
 • Due to the characteristics of LEDs, variations in light color may increase at dimming rates of 10% or less.

■ Surface-mounted/Pendant type ▶ p. 37

Lighting system with 3-way connections

This flexible lighting system adopts the unit method. Choose either upper and lower light distribution or lower light distribution alone. It can be used as a 3-way fixture configured as a surface-mounted or pendant installation.

Creating healthy office spaces with Tunable White lighting

The lighting environment in the office, where we spend much of our day, can have a huge impact on our health. Tunable White lighting helps to reduce the contrast between indoor lighting and natural outdoor light, which contributes to the maintenance of healthy biorhythms. This promotes good sleep and helps to create environments that support the health of office workers.

Certification to the WELL Building Standard

WELL certification is a building certification system. Operated by the International WELL Building Institute (IWBI) of the U.S.A., it is intended to evaluate healthy and productive spaces. It consists of a list of evaluation items based on eight concepts: air, water, nourishment, light, fitness, comfort, mind, and innovation. Under the category of lighting, "circadian lighting design" and "electric light glare control" are essential factors in the certification matrix.

As seen in this example, initiatives to design environments focused on the health of workers are accelerating worldwide.

In contemporary indoor lighting environments in which the color temperature and brightness levels remain constant, a measurable difference arises between natural ambient light and indoor lighting as time passes. This is believed to affect the secretion of melatonin. When melatonin production is suppressed, some people have difficulty sleeping. By closely reproducing the natural rhythm of light with Tunable White light-quality LEDs, one can increase or decrease the secretion of melatonin, thereby contributing to a setting conducive to either a more alert or more relaxed state of mind.

Tunable LEDZ

Fit/Fit Plus Wireless Tunable White Tunable Square Panel Light

A low-profile fixed light ideal for offices, conference rooms and stores

Typical Tunable White Settings

5000K 100% brightness

Start of the day
Welcoming with a bright light similar to sunrise

The illuminance inside the store is set high during periods of strong outdoor light so that the store interior does not feel dark in comparison.

4000K 90% brightness

When it is bright outside
A refreshingly bright interior is welcoming.

Ensures good visibility in crowded stores and promotes the customers' willingness to purchase.

3000K 80% brightness

Evening hours
Creates a homey atmosphere by gradually lowering the color temperature from the morning to the noon hour.

At the same time, fresh foods and prepared foods are well illuminated to convey a sense of freshness.

Comparison of morning and noon 40% reduction

The color temperature and brightness are reduced during evening and night-time hours to create a calming space and further reduce power consumption.

2700K 60% brightness

Night-time setting
The side dish counter and alcohol counter are busy.

The side dishes create an impression of freshness while the overall brightness is kept low.

SAFETY QUALITY REPORT

Aiming for further reliability improvement

Durability

ENDO products are subject to a rigorous testing program to rectify any safety issues.

To ascertain the limits of product and part performance and identify in advance any latent defects or weaknesses, we subject energized products to harsh heat and vibration stress several times greater than what is used in conventional reliability testing. Any defects or weaknesses identified as a result of this testing that may harbor safety or functional deficiencies are addressed by design changes or part replacements to ensure safety and functional integrity.

ENDO is the first Japanese lighting manufacturer to introduce Highly Accelerated Life Test (HALT), a type of destructive testing.

HALT tester
HALT testing consists of five steps: (1) a low-temperature stage, (2) a high-temperature stage, (3) a rapid temperature fluctuation stage, (4) a vibration stage, and (5) a compound (thermal shock + vibration) stage. We enhance product reliability by identifying operational and breakdown limits that lie outside the product specifications and optimizing the margins that lie between the specifications and those limits.

(Principal specifications)
- Temperature stress test: Maximum temperature range: -100°C to 200°C
- Vibration stress test: Maximum vibration range: 0 to 70 G

Measure against interference waves

The ENDO products satisfy the engineering criteria of the Electrical Appliances and Materials Safety Act.

From July 1, 2012, LED lighting fixtures are covered by the Electrical Appliances and Materials Safety Act. In ENDO products, not only the products applicable to the Electrical Appliances and Materials Safety Act, but also some non-applicable products (e.g. straight type LED module, etc.) are designed to satisfy the engineering criteria of the Electrical Appliances and Materials Safety Act based on the strict inspection standard of ENDO.

Item	Standard value		Remark
	Frequency range	Limit value	
Noise terminal voltage	526 5kHz~5MHz 5MHz~30MHz	56 dB or less 60 dB or less	In accordance with the Electrical Appliances and Materials Safety Act
Noise power	30MHz~300MHz	55 dB or less	In accordance with the Electrical Appliances and Materials Safety Act

◀ Radio wave test chamber

Noise reliability which satisfies the criteria of the Electrical Appliances and Materials Safety Act

The ENDO products have noise-resistant performance which sufficiently satisfies the noise terminal voltage and the noise power specified in the Electrical Appliances and Materials Safety Act

Noise emitted from electric/electronic devices is controlled by the Electrical Appliances and Materials Safety Act. Lighting fixtures applicable to the Electrical Appliances and Materials Safety Act are required to pass the noise terminal voltage test and the noise power test. Conventional lighting fixtures have not given significant effect on TV or radio. The ENDO products satisfy the criteria of the Electrical Appliances and Materials Safety Act similar to general lighting fixtures. Now, the LED lighting fixtures are added to the items for control as an electric appliance applicable to the Electrical Appliances and Materials Safety Act.

◀ Lightning Surge Tester

RoHS directive on restriction of the use of certain hazardous substances

In Europe, the RoHS directive^{*2} which restricts the use of 6 types of specified hazardous substances^{*1} contained in electric/electronic appliances sold in EU member nations is in force. After July, 2006, inclusion of specified hazardous substances is prohibited except for some applications. In the Green Purchasing Act, based on this movement, display and announcement for inclusion of specified hazardous substances are added to "Judgment criteria"^{*3}.

*1 Specified hazardous substances: Lead, mercury, cadmium, hexavalent chromium compound, polybromobiphenyl and polybromodiphenylether
*2 RoHS directive: European Parliament and Council Directive on restriction of the use of specified hazardous substances contained in electric/electronic appliances
*3 The content standard value is in accordance with the table A1, Appendix A and Appendix B in JIS C 0950: 2008.

Waterproof performance

Waterproof test complying with the JIS standard is performed.

Under the conditions specified in the JIS standard, the waterproof test has been performed longer than the time specified to check the waterproof performance of the products.

Standard value of waterproof test

In JIS standard C8105-1, the protection class (IP code) against entry of moisture from outside the product is specified with the specified measurement/testing method. The ENDO products have been through the tests complying with the JIS standard to check the waterproof performance.

Protection class against entry of moisture (JIS standard)

Secondary characteristic number	Protection class	
	Summary	Definition
3 (IPX3)	Protection against spraying water	Water sprayed at the angle from vertical to 60 degrees on both sides must not give adverse effect.

Automated waterproof tester

Waterproof tests specified by IEC and JIS are performed. It is used to check if adverse effect from rain or humidity is given and if safety is ensured by applying intermittent artificial rains over night and day.

Verification for durability, weatherproof

Weather meter

Thermal shock tester

For salt damage district

Salt water spray test
Mist salt water is sprayed to the coating surface and the plated surface to verify the corrosion resistance performance of the paint and the metal surface treatment.

Earthquake performance

The ENDO products have gone through aseismic performance evaluation with two types of aseismic tests.

Tensile and Compression Tester

- Aseismic tests in accordance with the building equipment aseismic design/construction guideline have been performed.
- Seismic tests with the seismic waveform (actual measurement waveform) which has caused great disaster including the Great East Japan Earthquake were performed to verify the product strength against earthquake and to maintain and improve the performance.

Vibration tester
Strength against earthquake or damage during transportation is checked. Acceleration of 1.5G (value equivalent to scale 7) can be applied. Similar waveform of an earthquake occurred in the past can be reproduced.

Earthquake grade (seismic scale) announced from an earthquake information is converted from the measured scale which turns the vibration intensity into a value at an observation point.

Seismic intensity scale table of the Japan Meteorological Agency

Seismic intensity scale	0	1	2	3	4	5-lower	5-higher	6-lower	6-higher	7
Measurement intensity scale	Less than 0.5	0.5 or more and less than 1.5	1.5 or more and less than 2.5	2.5 or more and less than 3.5	3.5 or more and less than 4.5	4.5 or more and less than 5.0	5.0 or more and less than 5.5	5.5 or more and less than 6.0	6.0 or more and less than 6.5	6.5 or more

High reliability under the unusual environment

Environmental Test Room

Dust Chamber

Optimum Setting for long life time

Constant temperature and constant humidity testing chamber

It is a dew point saturation type testing chamber which is used by the public testing agency. Assuming the internal and external operating environments, the temperature tests are performed to verify durability of products.

Earth-friendly design for environment

The ENDO products are environment friendly design.

ENDO provides "products conforming to environment" considering environment, and promotes reduction of environmental load in products and services through resource circulation by product recycling and through control of chemical substances contained in products.

Fluorescence X-rays Analyzer

To reduce environmentally hazardous substances, the directive (RoHS directive) to prohibit use of specific chemical substances contained in the product: cadmium (Cd), lead (Pb), mercury (Hg), hexavalent chromium (Cr+6) compound, polybromobiphenyl (PBB) and polybromodiphenylether (PBDE) has been in force in the member countries of EU (European Union) from July 1, 2006.

We have been taking actions to develop products which do not contain environmentally hazardous substances.

Endo Lighting Corp. obtained the certification of "Quality system" in the scope of "Design, development, production and additional services."
Initial registration: December, 1999 ISO9001: 1994
Revised registration: February, 2010 ISO9001: 2008
Design reviews which are performed in many steps and evaluations using the latest testing equipment are implemented. Through various processes of product planning, styling, design, quality check and product completion, we are aiming at reaching a higher level.

The Technical Center of ENDO LIGHTING Corp. obtained the certification of "Environmental system" in the scope of "Design, development, purchasing and quality assurance activities of lighting fixtures and sub-lighting fixtures."
Initial registration: June, 2007 ISO14001: 2004

TECHNICAL DATA

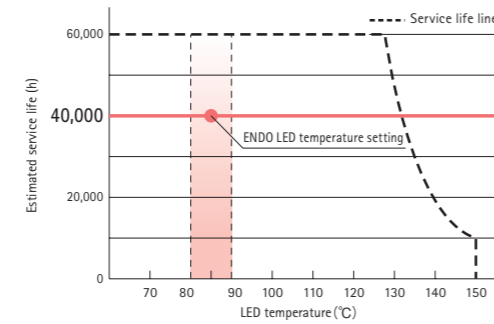

Service life of LED module

The service life of the white LED is defined in "JIS C 8105 - 3".
 "Total lighting time until the LED module does not turn on, or total lighting time until it falls to 70% of the measured value at the beginning of lighting, whichever is shorter, when the LED module is lit under the conditions specified by the lighting fixture manufacturer" (The "rated service life" of internal light type indicator lights that use LEDs as the light source is the time until the initial luminous flux of the light source is attenuated by 50%) We estimate the service life of the module according to these regulation.
 Since the service life of the LED module is the design service life, it is not the guaranteed service life. Also, the service life of the LED module and the service life of the lighting fixture are different.

Reliability for long service life of 40,000 hours

By designing our products with a sufficient temperature margin from the normal set value, we ensure high reliability for long service life. This also contributes to improving the reliability of the entire fixture.

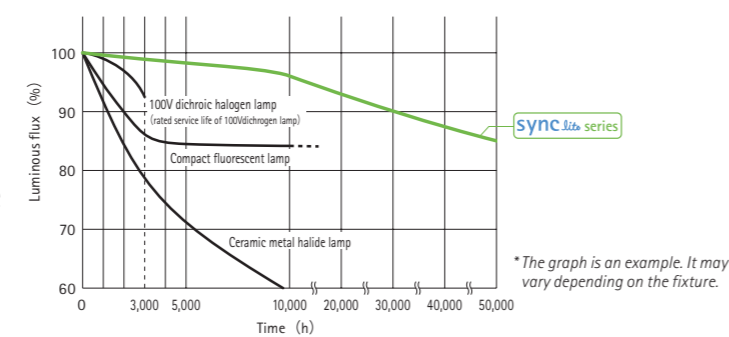

Relationship graph between LED temperature and service life

Luminous flux maintenance rate

Set according to "LED modules for general lighting service - Performance requirements (JIS C 8155)".

Comparison data of luminous flux maintenance rate

Reliability of luminous flux maintenance

The LEDZ series maintains brightness from the beginning to the end and shows a higher luminous flux maintenance rate than conventional lamps.

The replacement guideline of lighting fixtures is about 10 years, internal deterioration progresses.

Cumulative failure rate of lighting fixtures

8 to 10 years after installation, internal deterioration progresses even if there is no abnormality in appearance. For safety, energy conservation and the global environment, please inspect and replace lighting fixtures that are near the end of their service life as soon as possible.

* ambient temperature 30 °C or less, 10 hours / day, annual 3,000 hours lighting
 (If the ambient temperature is higher or the lighting time is longer, the replacement timing and service life will be shortened.)
 According to the explanation of JIS C 8105-1: 2010.

Color shift of LEDs

In comparison with general light sources (fluorescent lamps or incandescent bulbs etc.), color shift of white LEDs is large, in fact. For this reason, please note that colors may vary depending on each LED lighting fixture.

Certification

Please check the certification of models on this catalogue with our website or our sales office.

WARRANTY

Product warranty

Warranty period

ENDO warrants that product sold by ENDO will be eligible for a free replacement for a period of 5 years from the date of the invoice.

* Endo assumes no responsibility for a reduction in luminous flux of the LED module within 9 % (excluding secular attenuation of the luminous flux).

* Warranty exceptions: If the lighting fixture is used for more than 20 hours per day or continuously for 24 hours a day, the product warranty period (period applicable to provision of replacement parts at no charge) shall be reduced by half.

This warranty applies to lighting fixtures and parts only; labor required for replacement, shipment cost are not included.

Drivers for linear 17, Underwater fixtures, and drivers for underwater fixtures are 2 years warranty.

Notes on modules and Driver exchange

ENDO LEDZ series general

- Please select after checking the LED units, the LED modules, and the power supply mounted on your equipment.
- Either maintenance LED units or LED modules cannot be used alone. Be sure to install it on a special fixture for use.
- Use a Driver suitable for the maintenance LED module.
- When installing a maintenance LED unit, a LED module or a Driver, please ask an expert such as an electrical construction store.
- Please be aware that if installation is not performed properly it may cause fire, falling, discoloration, deformation or shortened life or malfunction of the LEDs.
- For details on how to install a maintenance LED unit, a LED module and a Driver, please refer to the instruction manual.
- Maintenance LED unit, LED module, and the Driver are not compatible with all products listed in this catalogue.

Attention

Please note that the specifications described in this catalogue are subject to change without notice.
